1. Introduction

HabitHub — Learning Backend & MongoDB Concepts

This report presents the work completed on Day 10, the fourth day of Week 3, for the Full Stack Web Development Internship Program at M-Tech Production & Marketing. The day focused on understanding the backend technologies required for the full-stack version of HabitHub.

2. Objectives

- Understand Node.js and Express.
 - Learn MongoDB concepts.
 - Understand REST APIs.
 - Explore authentication.
-

3. Task Description

The assigned task was to study back-end web architecture, gain expertise in REST API creation using Express, explore MongoDB schema modeling with Mongoose, and learn JWT-based client-server authentication flows.

4. Work Done

The following work was completed during the day:

- Watched YouTube tutorials about Node.js and Express REST APIs.
 - Studied MongoDB and Mongoose basics.
 - Learned how collections and documents work.
 - Reviewed REST API request methods.
 - Studied JWT authentication concepts.
 - Researched how frontend applications communicate with backend APIs.
 - Practiced simple API requests.
-

5. Challenges Faced

The following challenge was encountered during the day:

- Understanding how the frontend, backend, and database communicate with each other was initially challenging.

6. Key Learnings

Through this task, I learned:

- Express.js.
- REST APIs.
- MongoDB.
- Mongoose.
- JWT authentication.
- Client-server communication.

7. Conclusion

The day's research provided a stronger foundation for integrating the HabitHub frontend with its backend and database.
